SUMMARY

Information Technology undergraduate with a strong interest in cybersecurity, ethical hacking, and vulnerability assessment. Hands-on experience using Wireshark, Nessus, and Metasploit through practical security labs and vulnerability assessment projects. Skilled in network security, web application security, and system testing, with a strong foundation in security analysis, problem-solving, and technical troubleshooting. Eager to contribute to security operations, vulnerability management, and threat detection while expanding practical cybersecurity expertise.

EDUCATION

BSc in Information Technology

Rajarata University of Sri Lanka - Expected Graduation :2026

Diploma In English

British Way English Academy- 02/2021-05/2021

PROJECTS

AI-Based IoT Ripeness Detection System for Brown-Bagged TomEJC Mangoes (02/2025 - 03/2026)

- Developed an AI + IoT solution for non-destructive mango ripeness detection by applying supervised classification algorithms, achieving 90% model accuracy.
- Integrated NIR, E-Nose, accelerometer, and load cell sensors for real-time fruit quality analysis.
- Delivered a Flutter mobile application supporting ripeness prediction, sugar monitoring, and personalized health recommendations for end users.

Vulnerability Scanning with Nessus (03/2026)

- Conducted vulnerability assessment on test systems using Nessus to identify security weaknesses and analyze remediation recommendations.

Network Traffic Analysis using Wireshark (02/2026)

- Captured and analyzed network packets to inspect protocols, traffic behavior, and suspicious communication patterns using Wireshark.

Web Application Vulnerability Assessment (01/2026)

- Performed security assessment on a test web application to identify common vulnerabilities using vulnerability scanning and manual testing techniques.

Diabetes Risk Prediction (06/2025 - 08/2025)

- Built a machine learning model to classify diabetes and non-diabetes cases based on lifestyle factors using Python (Google Colab).

Fungal Colony Detection using Computer Vision (10/2024 - 12/2024)

- Developed a machine learning model to detect and classify fungi colonies from images datasets using Python and machine learning techniques

Desktop Text Editor(04/2024 - 05/2024)

- Built a feature-rich text editor with an intuitive user interface using the Qt framework.

LuminaSkin website (02/2024 - 04/2024)

- Designed and developed a fully responsive website showcasing skincare products.
-

SKILLS

- **Programming Languages:** C, C++, Python, Java
 - **Core Concepts:** Object-Oriented Programming (OOP), Fundamental Data Structures, and algorithms
 - **Web Technologies:** HTML, CSS, JavaScript, PHP, Frontend Development
 - **Cybersecurity Tools & Techniques:** Wireshark, Metasploit, Nessus Vulnerability Analysis, Ethical Hacking, Nmap, Kali Linux
 - **Machine Learning & AI:** Data Preprocessing, Feature Engineering, Model Training, Supervised Learning, Classification, Cross Validation, Hyperparameter Tuning
 - **ML Libraries:** scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib
 - **Tools & Frameworks:** Git, GitHub, Qt Creator, Anaconda, PyCharm, Google Colab, MySQL, Flutter, Postman
 - **General Technical Skills:** Debugging, System Testing, Technical Documentation, Problem Solving
-

INTERESTS

- Cybersecurity
- Ethical Hacking
- Network Security
- Threat Analysis
